Professional Summary

Adaptable **Full Stack Software Engineer** with a strong foundation in building end-to-end web applications. Currently specializing in **Java and Spring Boot** at NIIT, which provides a deep understanding of **strongly-typed languages**—a skill directly transferable to **TypeScript** development. Proven track record of deploying scalable solutions using the **MERN stack** (React, Node.js, Express, MongoDB) and RESTful APIs.

Technical Skills

Frontend	React, JavaScript (ES6+), HTML5, CSS3 (Custom Layouts)
Backend	Node.js, Express.js, REST APIs, Go (Golang)
Database	MongoDB (Mongoose ODM), SQL Basics
Tools	Git, GitHub, Vercel, Render, Railway
Core Concepts	Strong Typing (via Java), OOP, System Scalability, Responsive Design

Key Projects

ApexHomeStores – Full Stack E-commerce Platform

- Developed a comprehensive furniture retail platform using **React, Node.js, Express, and MongoDB**.
- Architected a robust backend with **Mongoose ODM** for efficient data modeling and persistence.
- Built a custom-styled, responsive frontend ensuring seamless user experience across mobile and desktop devices.
- Implemented core features including product management, shopping cart logic, and RESTful API communication.

Rentora Homes – Real Estate Filtering Platform

- Engineered a specialized platform for real estate agents in Lagos to manage and filter housing listings.
- Optimized frontend performance and state management to handle dynamic property searches.
- Successfully deployed and hosted the application on Vercel to facilitate real-world testing by target users.

TaskFlow API – Backend Development (Go)

- Designed a high-performance RESTful API using Go, focusing on efficient request handling and JSON persistence.
- Gained hands-on experience in backend optimization and managing data flow between server and client.

Education

NIIT – Software Engineering Program

Full Stack Development Track (In Progress - Semester 3)

- Current Focus: Advanced Enterprise Development with **Java and Spring Boot**.
